Overview

We aim to develop and host a single webpage application that allows users to book movie tickets on our platform. All users will be able to view all seats in the theatre and able to book the available seats.

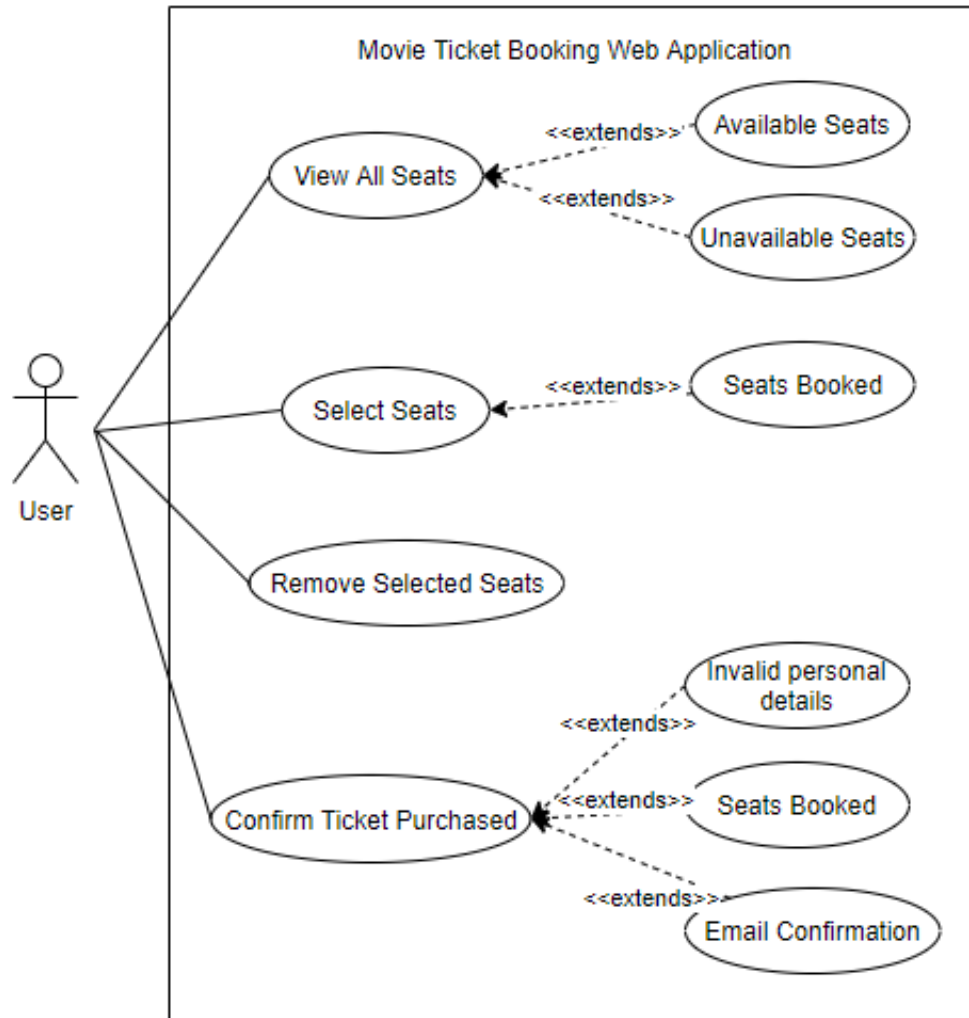

Functional Requirement Specification

Overview

Use Case Diagrams

Actor: User

User Stories

Actor: User

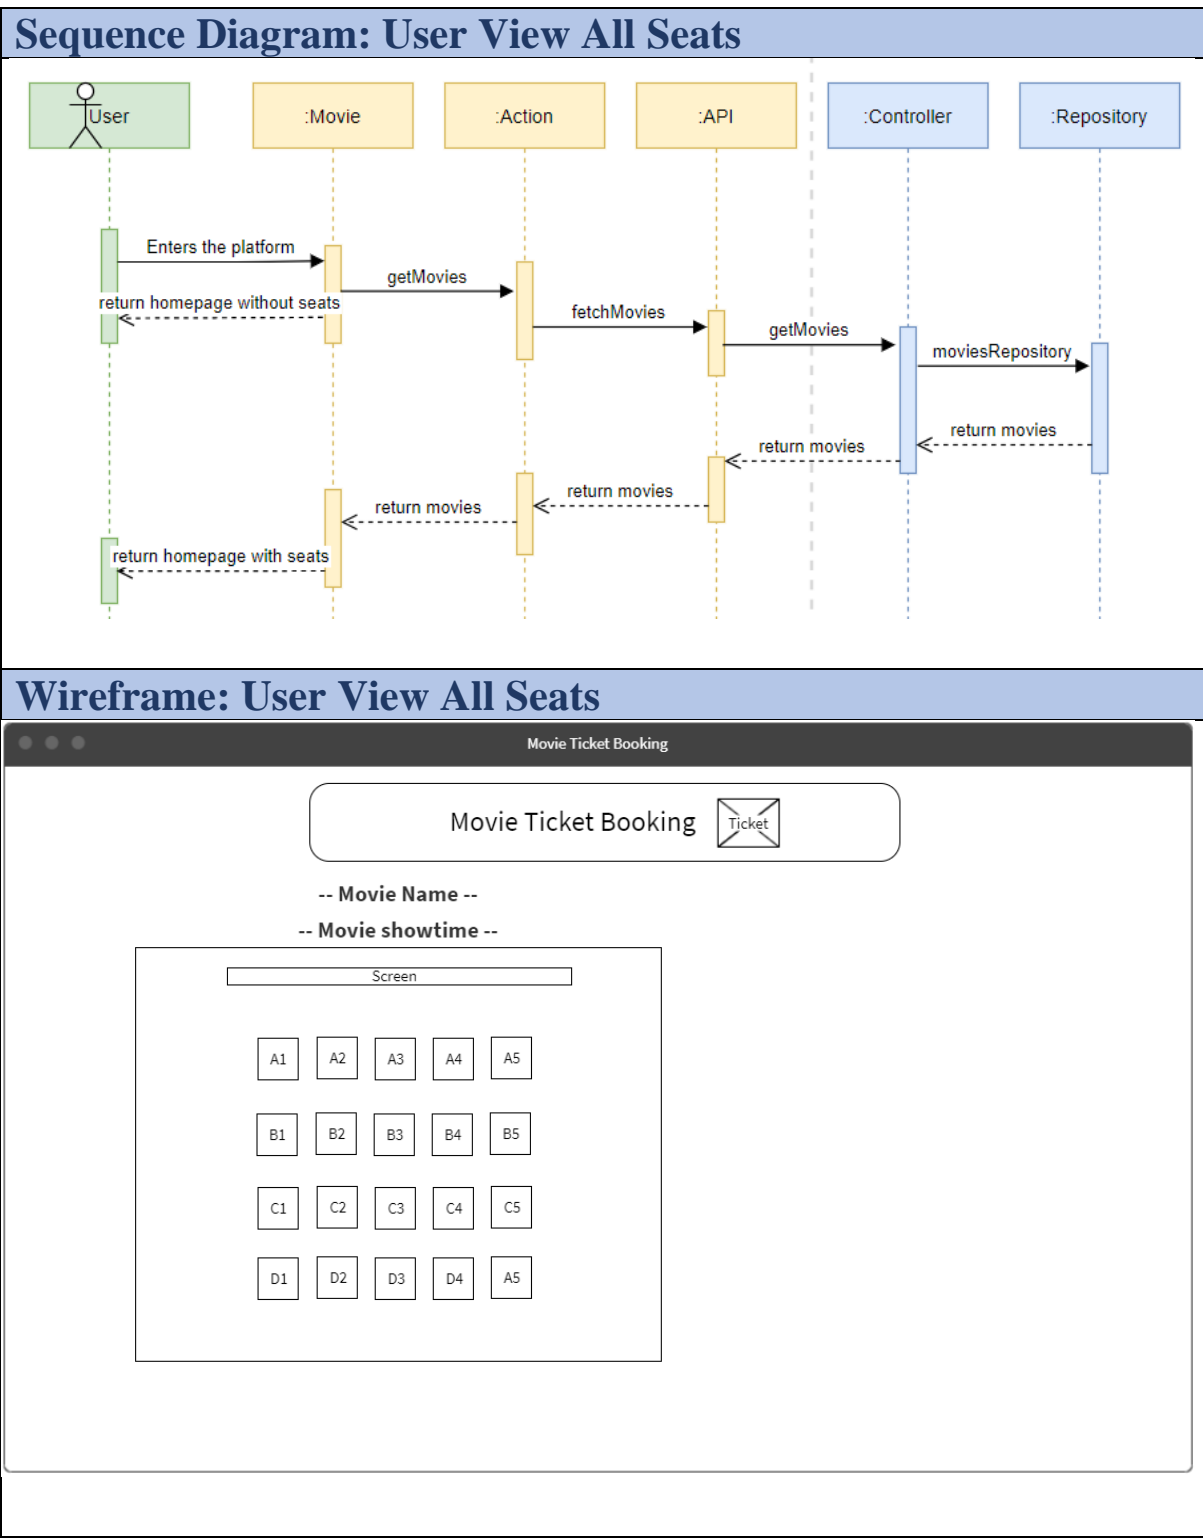

S/No.	Description
1	As a user, I want to be able to view all available and unavailable seats in the theatre so that I can know which of the seats are available for purchase.
2	As a user, I want to be able to select the available seats so that I can purchase a ticket for the seats that I am interested in.
3	As a user, I want to be able to remove selected seat so that I can remove it from the shopping cart.
4	As a user, I want to be able to confirm my purchase so that I can get the ticket for the movie.

Use Case Description, Sequence Diagrams & Wireframes

Actor: User

1. As a user, I want to be able to view all available and unavailable seats in the theatre so that I can know which of the seats are available for purchase.

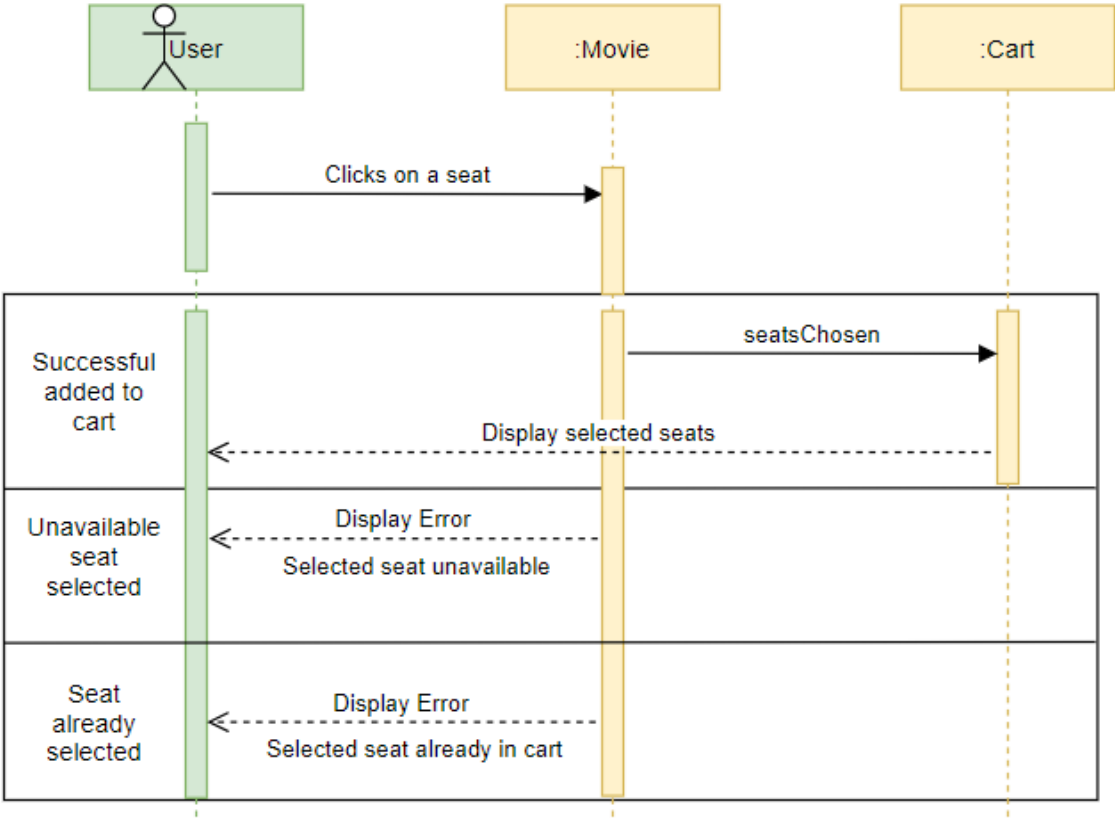

Use Case Description: User View All Seats	
Stakeholders and Goals	User – wants to view all seats
Description	Users want to be able to view all available and unavailable seats in the theatre.
Actors	User
Pre-Condition	None
Post-Condition	The map of all seats in the theatre is displayed to the user.
Trigger	The user wants to view the map of all seats.
Normal Flow: <ol style="list-style-type: none">1. The User enters the platform through the web application link.2. The system redirects the user to the website.3. The system shows the theatre map with all its seats with different colours for available seats and unavailable seats.4. End.	
Sub-Flows	None
Alternative/Exceptional Flows: None	

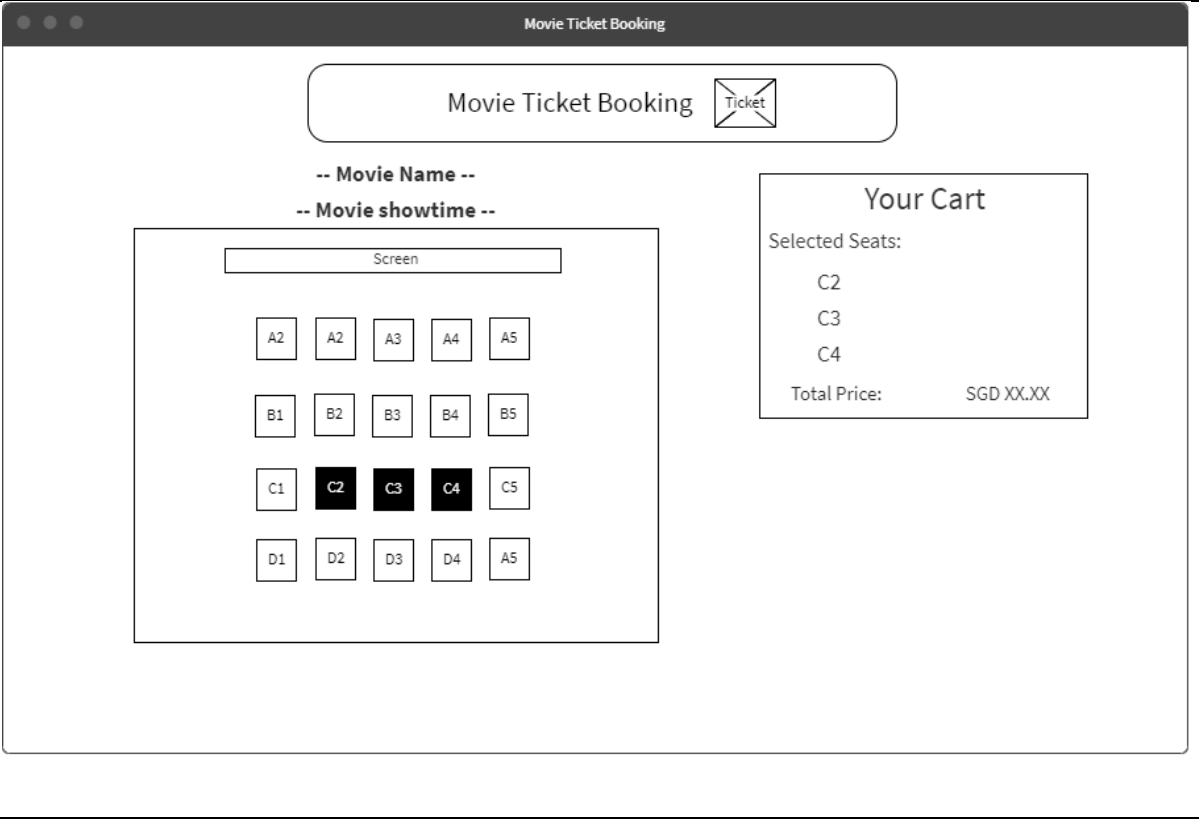

2. As a user, I want to be able to select the available seats so that I can purchase a ticket for the seats that I am interested in.

Use Case Description: User Select Seats	
Stakeholders and Goals	User – wants to select seat.
Description	A User wants to select available seats and add it to the shopping cart for purchase.
Actors	User
Pre-Condition	None
Post-Condition	Selected seat is added to the shopping cart.
Trigger	User wants to buy movie ticket.
Normal Flow: <ol style="list-style-type: none">1. The User clicks on any available seat shown on the theatre map.2. The System add the seat into the shopping cart and display it at the shopping cart section.3. End.	
Sub-Flows	None
Alternative/Exceptional Flows: <ol style="list-style-type: none">2a. The User clicks on the unavailable seat: A pop-up screen shows that the seat selected is unavailable.2b. The User clicks on a selected seat: A pop-up screen shows that the seat selected is already added to the cart.	

Sequence Diagram: User Select Seats

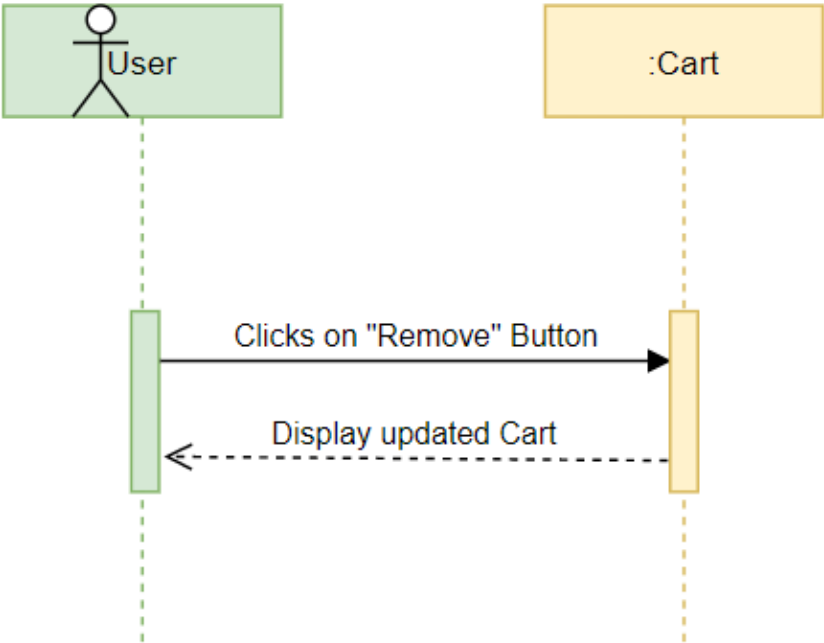

Wireframe: User Select Seats

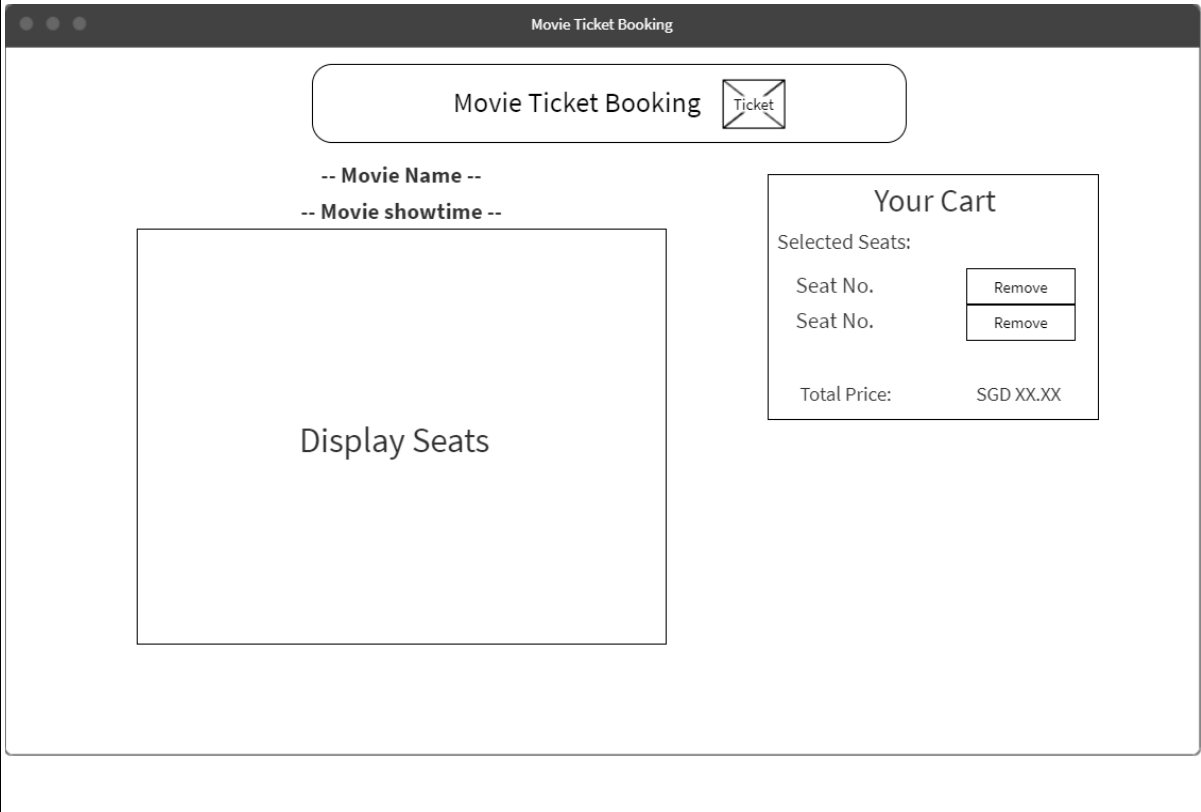

3. As a user, I want to be able to delete selected seat so that I can remove it from the shopping cart.

Use Case Description: User Remove Selected Seats	
Stakeholders and Goals	User – wants to remove selected seat.
Description	A User wants to select available seats and add it to the shopping cart for purchase.
Actors	User
Pre-Condition	One or more seats are selected.
Post-Condition	Selected seat is removed from shopping cart.
Trigger	User wants to remove movie ticket from cart.
Normal Flow: <ol style="list-style-type: none">1. The User clicks on the remove button beside the desire seat ID at the shopping cart.2. The System remove the seat from the shopping cart and display the latest shopping cart.3. End.	
Sub-Flows	None
Alternative/Exceptional Flows: None	

Sequence Diagram: User Remove Selected Seats

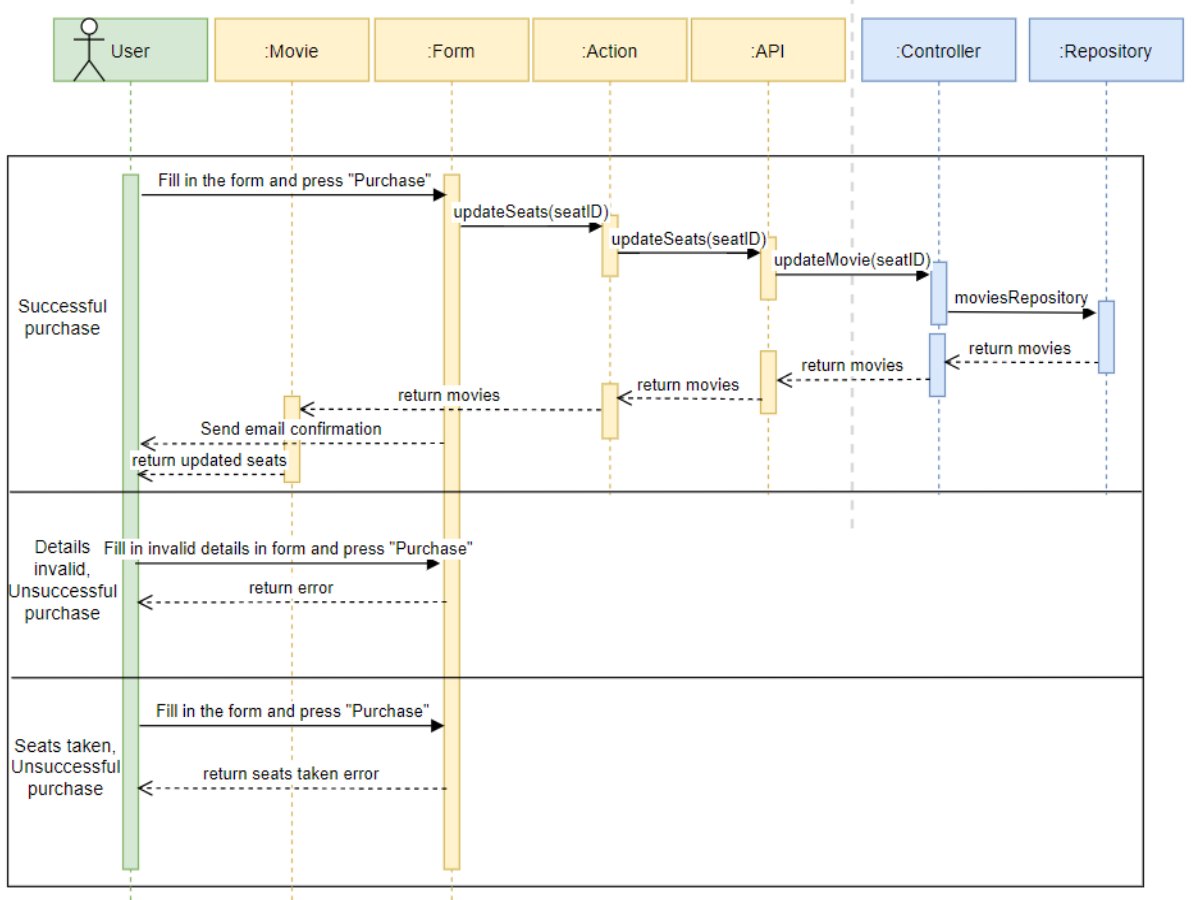

Wireframe: User Remove Selected Seats

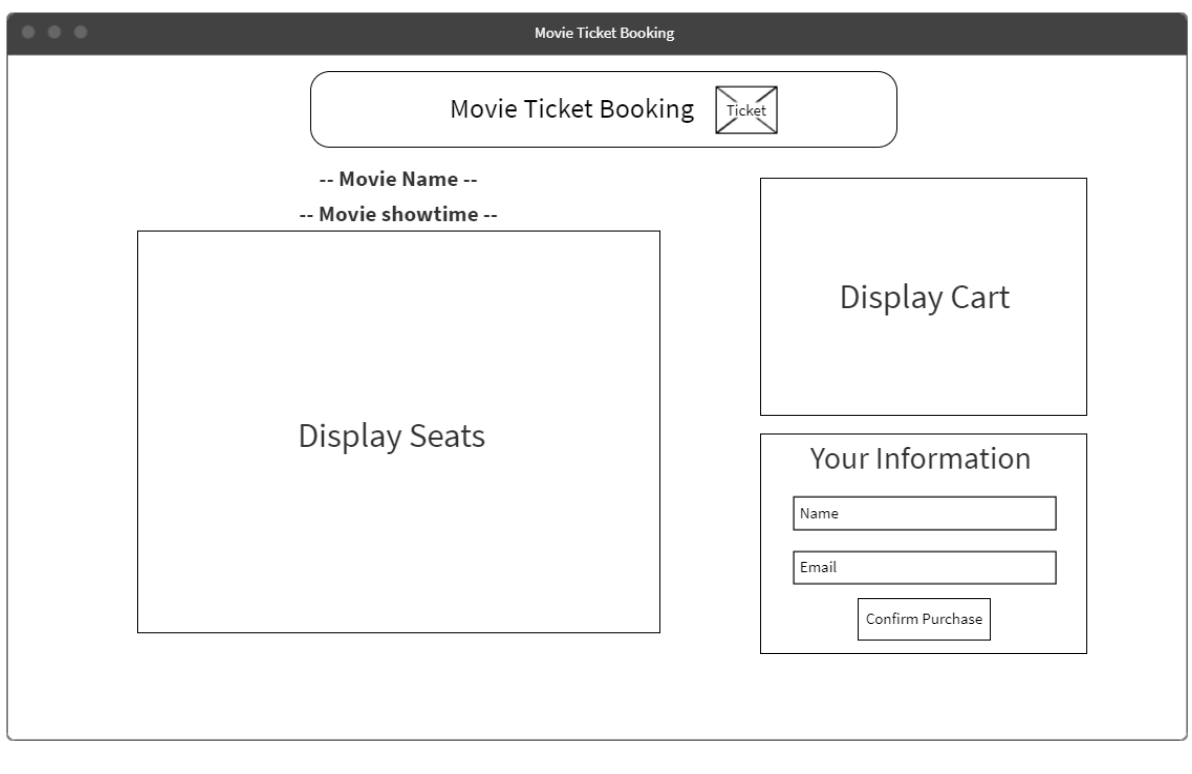

4. As a user, I want to be able to confirm my purchase so that I can get the ticket for the movie.

Use Case Description: User Confirm Ticket Purchased	
Stakeholders and Goals	User – wants to confirm purchase from cart.
Description	A User wants to confirm his/her purchase of movie tickets.
Actors	User
Pre-Condition	One or more seats are selected.
Post-Condition	Tickets are purchased.
Trigger	User wants to confirm the purchase of movie ticket.
Normal Flow: <ol style="list-style-type: none">1. The User fill in the personal details form at the cart and click on the “Purchase” button.2. The System confirm the purchase and change the seats status to unavailable at database and send out a confirmation email to user.3. End.	
Sub-Flows	None
Alternative/Exceptional Flows: <ol style="list-style-type: none">2a. “Name” text field at the form is empty: A pop-up screen remind the user to fill in their name.2b. “Email” text field at the form is empty or invalid: A pop-up screen remind the user to fill in a valid email.2c. The seats are taken by other user right before the purchase: A pop-up screen tells the user that the seats are taken and suggest them to choose new seats.
